## DRILLING PLAN TO ACCOMPANY APPLICATION FOR PERMIT TO DRILL

Company:

Anadarko Petroleum Corporation

Well: Helper State D-5

Location:

644' FNL & 2165' FEL

Lease: ML 45804

NE Sec 4-T14S-R10E

Surface Elevation: 6211'

#### A. Estimated Tops of Important Geologic Markers:

GEOLOGIC MARKER	DEPTH
Mancos / Emery	Surface
Bluegate Shale	1561'
Ferron Sandstone	2561'
Ferron Coal Top	2591'
Base of Ferron Coal	2741'
Tununk Shale	2791'

B. Estimated Depth at which Water, Oil, Gas or other Mineral-Bearing zones are expected to be encountered:

Gas-bearing Ferron Coal is expected to be encountered from 2591'-2741'.

All fresh water zones and prospectively valuable mineral zones encountered during drilling will be recorded by depth and adequately protected. All oil and gas shows will be tested to determine commercial potential.

#### C. Pressure Control Equipment:

A 9" 3000 psi WP double gate hydraulic BOP with pipe rams and blind rams will be installed on the 8-5/8" casinghead. The BOP stack will be tested prior to drilling below surface casing. The ram preventers will be tested to 70% of the working pressure of the casinghead. The annular will be tested to 50% of its working pressure. Operational checks will be made daily or on trips. A BOP schematic is shown on attached Exhibit "A".

The BOP system will be consistent with API RP 53. Pressure tests will be conducted before drilling out from under all casing strings which are set and cemented in place. Blowout preventer controls will be installed prior to drilling the surface casing plug and will remain in use until the well is completed or abandoned. Preventers will be inspected and operated at least daily to ensure good mechanical working order. This inspection will be recorded on the daily drilling report. Preventers will be pressure tested before drilling casing cement plugs. The accumulator system will meet IADC guidelines concerning pump capacities, storage capacity, and reservoir volume. Closing unit fluid volume will be sufficient to pre-charge the system to operating pressure plus 50% excess. One set of controls will be in the doghouse on the rig floor and one set will be remote on the drilling pad.

#### D. Casing Program

Surface Casing

8-5/8" casing will be set at approximately 300'.

**Production Casing** 

5-1/2" casing will be set at approximately 3100' if well is to be completed.

	SIZE	WT./FT.	GRD.	THRD.	CONDITION
Surface	<del>8-5/8</del> "	24.0	K-55	8rd	New
Production	5-1/2"	17.0	K-55	8rd	New

#### Casing Design Factors

The safety factors on casing strings will equal or exceed the following values:

Collapse 1.0 Joint Strength 1.6 Burst 1.33

#### **Cement Program**

Surface - Cement will be circulated to the surface. Casing will be cemented with approximately 200 cu. ft. of API Class 'G' cement.

Production - Casing will be cemented with approximately 300 cu. ft. of API Class 'G" cement. The actual cement volume will be based upon hole depth and gauge, and will be determined from logs.

Additional additives will be used to retard the cement, accelerate the cement, control lost circulation, or control fluid loss. All cementing will be done in accordance with API cementing practices.

#### E. Mud Program and Circulating Medium:

Fresh water circulated through the reserve pit will be used for drilling the 12-1/4" surface hole to 300'. An air or air/mist system will be used for drilling from below surface pipe at 300' to TD.

The mud system will be visually monitored.

A truck-mounted air drilling rig may be used to drill the surface hole to 300' and to pre-set the surface casing before moving a drilling rig on location to drill the rest of the hole to TD.

Sufficient mud materials will be stored at the wellsite to maintain mud requirements and to control minor well control or lost circulation problems.

#### F. Coring, Logging, and Testing Program:

- a. Rotary sidewall coring in the Ferron Sandstone interval (2591'-2741') may be performed, depending upon shows and hole conditions.
- b. DST's may be run depending upon shows.
- c. The following logging program is planned:
  - 1. DIL-ML-SP-GR-CAL over prospective intervals.
  - 2. SDL-CNL-GR-CAL over prospective intervals.

- d. A mud logging unit with chromatograph will be used from approximately 300' to TD.
- e. Productive zones will be swab tested. Water produced during testing will be contained in the temporary reserve pit. All produced oil will be stored and sold. Gas will be flared during testing.

#### G. Abnormal Conditions and Potential Hazards:

Abnormal conditions such as abnormal temperatures or pressures are not anticipated. Potential hazards such as  $H_2S$  are also not anticipated.

cerbide sheks.

MINIMUM BLOWOUT PREVENTER REQUIREMENTS - NORMAL SERVICE PRESSURE

MINIMUM WORKING PRESSURE

## SURFACE USE PLAN TO ACCOMPANY APPLICATION FOR PERMIT TO DRILL

Anadarko Petroleum Corporation
Helper State D-5
644' FNL & 2165' FEL, NE Sec 4-T14S-R10E
Carbon Co., Utah

#### 1. Existing Roads: See Map A and Map B.

- a. Location of proposed well in relation to town or other reference point: Location is approximately 2.0 miles north of Price, Utah.
- b. Proposed route to location: (See Map "A" for marked access).
- c. Location and description of roads in the area: (See Map "A" and Map "B").
- d. Plans for improvement and/or maintenance of existing roads: The existing roads will be maintained in the same or better condition as existed prior to the commencement of operations.

#### 2. Planned Access Roads:

- a. The existing and proposed roads will be crowned, ditched or dipped from the existing County road to the location prior to use for moving the drilling rig onto the site. The maximum disturbed width will not exceed 30' with an eighteen foot running surface. Dust will be controlled by the use of water or an approved dust retardant. All roads, including access to drilling water, will be maintained in as good or better condition than existing condition.
- b. Maximum grades: Maximum grade will be less than 10%.
- c. Turnouts: None planned.
- d. Location: Access to the location uses an existing road up to the location. New road that will be constructed for access off of the existing road is flagged. (See Map B).
- e. Drainage: The road surface will be center crowned with ditches on each side of road. Slopes will have a maximum slope of 3:1.
- f. There will be no culverts placed in the ditchways during the drilling phase of operations. Further evaluation will be made for the additions of culverts if the road is to have long-term use.
- g. Surface materials (source): Surface materials will most likely not be required to be transported to the access road or drillpad for construction purposes. However, if gravel is required, the dirt contractor will be responsible for locating and permitting of any necessary construction material.

#### 3. Location of Existing Wells: (2 mile radius)

The proposed Helper State D-5 location is approximately 2000' northeast of the proposed Helper State D-4.

#### 4. Location of Tank Batteries and Production Facilities:

All permanent (on site for six months or longer) structures constructed or installed (including oil well pumpjacks) will be painted a flat, non-reflective, earthtone color to match the standard environmental colors, as determined by the Rocky Mountain 5-State Interagency Committee. This will include all facilities except those required to comply with O.S.H.A. (Occupational Safety and Health Act) regulations. These will be painted the color stipulated by O.S.H.A. All facilities will be painted within six months of installation.

Gas meter runs for each well, if needed, will be located within 500 feet of the wellhead. The gas flowline will be buried from the wellhead to the meter and 500 feet downstream of the meter run or any production facilities. Meter runs will be housed and/or fenced.

The oil and gas measurement facilities will be installed on the well location. The oil and gas meters will be calibrated in place prior to any deliveries. Test for meter accuracy will be conducted monthly for the first three months on new meter installations and at least quarterly thereafter. The State of Utah will be provided with a date and time for the initial meter calibration and all future meter proving schedules. A copy of the meter calibration reports will be submitted to State of Utah. All meter measurement facilities will conform with the API standards for liquid hydrocarbons and the AGA standard for natural gas measurement.

#### Location and Type of Water Supply:

Water supply for drilling and completion purposes will be furnished by a water hauler.

Water supply will be obtained from either the Price River or from Willow Creek.

#### 6. Source of Construction Material:

Native material will be used for road surfacing and pad construction.

Should additional construction material be required, it will be the responsibility of the dirt contractor to locate and permit (if necessary) use of that material.

#### 7. Methods of Handling Waste Disposal

The reserve pit will be lined.

Produced waste water will be confined to a lined pit for a period not to exceed 90-days after initial production.

Trash will be confined in a covered container and hauled to an approved landfill. Burning of waste or oil is not approved, and spoil material will be kept on site for recontouring.

No bore holes will be used for disposal of waste materials. Human waste will be contained and will be disposed of at an approved sanitary landfill.

#### 8. Ancillary Facilities:

Not applicable for drilling operations in this area.

#### 9. Wellsite Layout:

A plat showing access to the well-pad and the location of the reserve pit are attached.

The location and access road will be cleared of trees prior to any construction. Stumps will be scattered or buried in an area designated by the State of Utah. Any stump left in place will be cut so that the stump height does not exceed 12 inches. All slash less than four inches in diameter will be chipped or scattered outside the cleared area and must be within 24 inches of the ground at all points. All material four inches in diameter or greater will be removed. All of the above will take place prior to placement of drilling facilities.

Topsoil and vegetation will be stripped together to a depth of 6 to 8 inches and stockpiled by wind-row on the northeast edge of the location. No topsoil stripping will be allowed when soils are moisture saturated to a depth of 3 inches, or frozen below the stripping depth.

The reserve pit will be fenced on three sides prior to drilling activity and closed off on the fourth side after drilling is finished. Fencing will be four strands of barbed wire or 48-inch woven wire with one strand of barbed wire above the woven wire. All corners will be braced with a wooden H-type brace. The fence construction will be on cut or undisturbed ground and the fence will be maintained in a livestock tight condition.

#### 10. Plans for Restoration of Surface:

The State of Utah will be notified at least 24-hours prior to commencing reclamation work.

Immediately upon completion of drilling, the location and surrounding area will be cleared of all debris, materials, trash, and junk not required for production.

Before any dirt work to restore the location takes place, the reserve pit must be completely dry and all cans, barrels, pipe, etc. will be removed.

If the well is a producer:

Unneeded areas of the location will be reclaimed as soon as the reserve pit has dried. Upgrade and maintain the access roads as necessary to prevent soil erosion and accommodate year-round traffic. Reshape areas unnecessary to operations, rip or disk on the contour, and seed all disturbed area outside the work area according to the seed mixture specified below. Save the topsoil for use during final reclamation unless the site can be recontoured to blend with the natural topography as required for final abandonment. Perennial vegetation must be established. Additional work will be required in case of seeding failures. All permanent facilities placed on the location will be painted to blend with the natural environment.

If the well is abandoned/dry hole:

Restore the access road and location to blend with the natural topography. During reclamation of the site, push the fill material into cuts and up over the backslope. Leave no depressions that will trap water or form ponds. Distribute topsoil evenly over the location and seed according to the above seed mixture. The access road and location will be ripped or disked prior to seeding.

Prepare seed-bed by contour cultivating four to six inches deep. Drill seed 1/2 to 1 inch deep following the contour. In areas that cannot be drilled, broadcast seed at 1.5 times the application rate and cover 1/2 to 1 inch deep with a harrow or drag-bar.

Fall seeding will be completed after September 1 and prior to ground frost. Spring seeding will be completed after the frost has left the ground and prior to June 1.

#### 11. Other Information:

There will be no deviation from the proposed drilling and/or workover program without prior approval. Safe drilling and operating practices must be observed.

"Sundry Notice and Report on Wells" will be filed for approval for all changes of plans and other operations.

The dirt contractor will be provided with an approved copy of the surface use plan.

An archaeology inspection will be performed by an authorized contractor. Their report on this inspection will be sent directly to the State of Utah.

The operator is responsible for informing all persons in the area who are associated with this project that they will be subject to prosecution for knowingly disturbing historic or archaeological sties, or for collecting artifacts or fossils. The Operator will immediately bring to the attention of the State of Utah any and all antiquities or other objects of historic or scientific interest including, but not limited to, historic or prehistoric ruins, artifacts, or fossils discovered as a result of operations under this permit. The operator will immediately suspend all activities in the area of the object and will leave such discoveries intact until told to proceed by the State of Utah. Notice to proceed will be based upon evaluation of the cultural significance of the object. Evaluation will be by a qualified professional. When not practical, the Operator will follow the mitigation requirements set forth by the State of Utah concerning protection, preservation, or disposition of any sites or material discovered. Within five working days the State of Utah will inform the Operator as to:

Whether materials appear eligible for the National Register of Historic Places;

the mitigation measure(s) the Operator will likely have to undertake before the site can be used (assuming in situ preservation is not necessary); and,

a time frame for the State of Utah to complete an expedited review to conform, through the State Historic Preservation Officer, that the findings are correct and that mitigation is appropriate.

If the Operator wishes, at any time, to relocate activities to avoid the expense of mitigation and/or the delays associated with this process, the State of Utah will assume responsibility for whatever recordation and stabilization of the exposed materials may be required. Otherwise, in those situations where the State of Utah determines that mitigation, data recovery and/or salvage excavations are necessary, the Operator will bear the cost. The State of Utah will provide technical and procedural guidelines for the conduct of mitigation. Upon verification from the State of Utah that the required mitigation has been completed, the Operator will then be allowed to resume construction.

#### Lessee's or Operator's Representatives and Certification: 12.

PREPARED: DATE: 2-JUNE-97

Operator Name: Anadarko Petroleum Corp
Name & Number: Helper State D - 5
API Number: 43 - 007 - 30367
Location: 1/4,1/4 NWNE Sec. 4 T. 14 S R. 10 E
Geology/Ground Water:
A minor aquifer may be encountered close to the surface. Two active springs, closely subjacent to the pediment mantle, are ~1.2 miles northeast on an adjacent bench according to the Helper 7.5 Minute Topo. The pediment mantle is the only known sediment which could present a significant ground water resource and the proposed 300' of surface casing will adequately cover the extent of these shallow deposits. Garley Canyon Sandstone Beds of the Blue Gate Shale Member of the Mancos Shale thin or pinch out nearby so they should not present a ground water resource.
Reviewer: Christopher J. Kierst Date: 6/24/97
The pre-site review was conducted by division personnel in accordance with the rules and guidelines of the Division. All surface use agencies were notified and the private surface owner was contacted. Drainage and location problems were discussed with all the interested parties in attendance. It was recommended that the Division of Water Rights personnel be contacted about a drainage crossing 1/4 mile from the location, and that culverts of sufficient size and number be used in order to stabilize the road and location. It was also decided that the topsoil and left over spoil piles on all locations would be seeded in order to stabilize the pile and minimize erosion. The access roads and infrastructures will be graveled kept compacted to minimize dust.
Reviewer: Michael Hebertson & Jimmy Thompson
Date: <u>6/11/97</u>
Conditions of Approval/Application for Permit to Drill:  1. Culverts will be placed where needed on the approach road and will be of sufficient size to handle flash flood flows that are common in the area.  2. A pit liner of at least 12 MILS thickness will be required.  3. The location will be bermed on all sides to prevent water entering or leaving location.  4. The topsoil and spoil piles will be re-seeded as soon as possible after the well is placed on production.  5. The unused portions of the location and bermed area will be re-seeded in order to control erosion.  6. The shoulders of the roads and pipelines will be reseeded and reclaimed as soon as practicle.  7. Trees on this location will be rolled to the edges of the site and left for gathering by the local population.
B. The Jeep road to the location will be abandoned and restored on both sides of the access for the new road.

#### CONDITIONS OF APPROVAL

Well Name and Number:

Helper State #D-5

API Number:

43-007-30367

Operator:

Anadarko Petroleum Corporation

Type of Approval Requested:

APD approval

Reference Document:

APD dated 5/16/97

#### **Approval Conditions:**

- 1. Compliance with the Conditions of Approval/Application for Permit to Drill outlined in the Statement of Basis dated June 24, 1997 (copy attached).
- 2. The cement volumes for the 5-1/2" casing shall be determined from actual hole conditions and the setting depth of the casing in order to place cement from the pipe setting depth back to the surface.
- 3. The presence of cement and a good quality bond surrounding the 5-1/2" casing shall be determined by means of a cement bond log. If such conditions cannot be shown, the operator shall obtain Division approval of a remedial plan for cementing the 5-1/2" casing.

#### Division of Oil, Gas and Mining

OPERATOR: Anadarko
WELL NAME & NUMBER: Helper State D - 5
API NUMBER: 43-007-30367
LEASE: State ML - 45804 FIELD/UNIT: Undesignated (002)
LOCATION: 1/4,1/4 NWNE Sec: 4 TWP: 14 S RNG: 10 E 644 FNL 2165 FEL
LEGAL WELL SITING: 460 F SEC. LINE; F 1/4,1/4 LINE; 920 F ANOTHER WELL.
GPS COORD (UTM): x = 516844 N; y = 4387959 E
SURFACE OWNER: State of Utah
<u>PARTICIPANTS</u>
M. Hebertson, J. Thompson (DOGM), Ed Bonner (SITLA), Ben Morris (Wildlife), Jeff Duncan (Anadarko), Mike Robinson Contractor, Steve
Gray (Gray Construction), Lloyd Walker (Walker Construction), Mike
Barnes (Neils Construction), David Kaye, Heath Lemon (Uintah
Engineering).
REGIONAL/LOCAL SETTING & TOPOGRAPHY
Western margin of Colorado Plateau/~4 miles south of the Tavaputs
Plateau and 4 miles South of the 1000-1500' Book Cliffs. Location is
on the pediment mantle which is Quaternary in age. Shallow canyons
(1-200' deep) incise the pediment forming benches north and east of Price, UT, below the Book Cliffs. Pediment gently slopes south.
Location is on Pediment mantle the ground is almost flat. This
location lies in an open area on the upper bench West of Meads
Wash.
SURFACE USE PLAN
CURRENT SURFACE USE: Grazing, recreation and wildlife habitat
PROPOSED SURFACE DISTURBANCE: 270' X 180' pad with 130' X 50' X 10'
pit included as part of the location. 0.2 mile of approach road and upgrades needed. Spoils and topsoil stockpiles and reserve pit
backfill pile will be stored outboard of the pad

LOCATION OF EXISTING WELLS WITHIN A 1 MILE RADIUS: Helper State D-7

LOCATION OF PRODUCTION FACILITIES AND PIPELINES: <u>Powerline and</u> gathering system follow approach road.

SOURCE OF CONSTRUCTION MATERIAL: Native material will be used to gravel approach road and location. Any additional material will be acquired from TN Construction sources.

ANCILLARY FACILITIES: None

#### WASTE MANAGEMENT PLAN:

Portable toilets; garbage cans on location will be emptied into centralized dumpsters which will be emptied into an approved landfill. Reserve pit will be dried after use and then buried.

Water produced during testing and completion will be stored in a lined temporary reserve pit and disposed of by injection, reverse osmosis or evaporation.

#### ENVIRONMENTAL PARAMETERS

AFFECTED FLOODPLAINS AND/OR WETLANDS: Price Canal is ~1.75 miles southwest. Price River is ~2.00 miles southwest. State Division of Water Rights personnel (Mark Page of Price, UT-?) should be included in activities and planning to clear areas for compliance with 404 Dredge and Fill Permit requirements.

FLORA/FAUNA: Sagebrush, indian rice grass, broom snakeweed, winterfat, greasewood, shadscale, blue gramma, dryland sedge, elymus species, salina wild rye, cactus, / birds, coyotes, rodents, elk, deer, reptiles.

SOIL TYPE AND CHARACTERISTICS: <u>Sandy</u>, <u>cobbled</u>, <u>highly-permeable</u> <u>soil</u> <u>on the Quaternary pediment mantle veneer which overlies the existing</u>
Blue Gate Shale Member of the Cretaceous Mancos Shale.

SURFACE FORMATION & CHARACTERISTICS: <u>Quaternary pediment mantle</u>. <u>Light brown</u>, <u>brown</u>, <u>gray</u>, <u>or reddish-brown</u>, <u>unconsolidated</u>, <u>massively-bedded sediments consisting of silts</u>, <u>sands</u>, <u>pebbles</u>, <u>boulders</u>, <u>and cobbles</u> in a poorly <u>sorted mixture</u>.

EROSION/SEDIMENTATION/STABILITY: Stable ground with no undermining, flowage or upheaval evident locally. Erosion is limited to minor dry washes during cloudbursts, high winds and periods of rapid snowmelt with sedimentation occurring during the wane of these episodes. This location is at the head of Warehouse Canyon and will need special consideration.

PALEONTOLOGICAL POTENTIAL: None

#### RESERVE PIT

CHARACTERISTICS: 130' X 50' X 10' excavated pit bermed to deflect runoff.
runorr.
LINER REQUIREMENTS (Site Ranking Form attached): Minimum 12 mil synthetic liner
synchecte times
SURFACE RESTORATION/RECLAMATION PLAN
Site will be restored to SITLA standards upon abandonment.
SURFACE AGREEMENT: As per mineral lease #ML-45804 with the State of Utah
CULTURAL RESOURCES/ARCHAEOLOGY: Cleared and on-file.
OTHER OBSERVATIONS/COMMENTS
Items discussed included: 1)Location of power lines and gathering
system. 2) Need for consultation with affected municipalities.
3) Reclamation of unnecessary road segments of existing two-track jeep
trails created by more directly accessing location. 4)Minimizing
access routs to more direct approaches. 5) Startups after July 15,
1997 as per DWR. 6) Drilling restrictions after December 1, 1997 as
per DWR. 9) Investigate the use of existing access roads.
ATTACHMENTS:
photos.

Re: Helper State D-5 Well, 644' FNL, 2165' FEL, NW NE, Sec. T. 14 S., R. 10 E., Carbon County, Utah

Gentlemen:

Pursuant to the provisions and requirements of Utah Code Ann. 40-6-1 et seq., Utah Administrative Code R649-3-1 et seq., and the attached Conditions of Approval, approval to drill the referenced well is granted.

This approval shall expire one year from the above date unless substantial and continuous operation is underway, or a request for extension is made prior to the expiration date. The API identification number assigned to this well is 43-007-30367.

Sincerely,

James P Bruch Lowell P. Braxton Deputy Director

#### Conditions of Approval

#### 1. General

Compliance with the requirements of Utah Admin. R. 649-1 et seq., the Oil and Gas Conservation General Rules, and the applicable terms and provisions of the approved Application for Permit to Drill.

2. Notification Requirements

Notify the Division within 24 hours following spudding the well or commencing drilling operations. Contact Jimmie Thompson at (801)538-5336.

Notify the Division prior to commencing operations to plug and abandon the well. Contact John R. Baza (801)538-5334 or Mike Hebertson at (801) 538-5333.

- 3. Reporting Requirements
  - All required reports, forms and submittals shall be promptly filed with the Division, including but not limited to the Entity Action Form (Form 6), Report of Water Encountered During Drilling (Form 7), Weekly Progress Reports for drilling and completion operations, and Sundry Notices and Reports on Wells requesting approval of change of plans or other operational actions.
- 4. Compliance with the Conditions of Approval/Application for Permit to Drill outlined in the Statement of Basis dated June 24, 1997 (copy attached).
- 5. The cement volumes for the 5-1/2" casing shall be determined from actual hole conditions and the setting depth of the casing in order to place cement from the pipe setting depth back to the surface.

6. The presence of cement and a good quality bond surrounding the 5-1/2" casing shall be determined by means of a cement bond log. If such conditions cannot be shown, the operator shall obtain Division approval of a remedial plan for cementing the 5-1/2" casing.

# INSTRUCTIONS

This form should be completed in compliance with the Utah Oil and Gas Conservation General Rules. If not filed prior to this time, all logs, tests, and directional surveys as required by Utah Rules should be attached and submitted with this report.

ITEMS 22 and 24: If this well is completed for separate production from more than one interval zone (multiple completion), so state in iten 22, separate report (page) on this form, adequately identified, for each additional interval to be separately produced, showing the additional data and in item 24 show the producing interval, or intervals, top(s), bottom(s) and name(s) for only the interval reported in item 33. Submit a ITEM 18: Indicate which elevation is used as reference for depth measurements given in other spaces on this form and on any attachment.

pertinent to such interval. ITEM 29: "Sacks Cement": Attached supplemental records for this well should show the details for any multiple stage cementing and the location q the cementing tool.

ITEM 33: Submit a separate completion report on this form for each interval to be separately produced (see instruction for items 22 and 24 above).

RE: Helper State D-5 Sec. 4, T14S, R10E Carbon County, Uta

#### Gentlemen:

Please find enclosed, in triplicate, the Well Completion Report (Form 8) for the above referenced well. Also enclosed are copies of the wellbore diagrams, drilling reports, and open hole logs.

Please hold the logs confidential for a period of two years. Should need any additional information, please contact the undersigned at (281) 873-3899.

Best Regards,

ANADARKO PETROLEUM CORPORATION

#### CONDITIONS OF APPROVAL

Well Name and Number:

Helper State D-5

API Number:

43-007-30367

Operator:

Anadarko Petroleum Corporation

Type of Approval Requested:

Extension of time period for conducting production test and

venting produced gas

Reference Document:

Sundry notice dated 10/23/97

#### **Approval Conditions:**

- 1. As requested by the referenced sundry notice, approval is granted to extend the time allowed for conducting the stabilized production required by Rule R649-3-19 of the Oil and Gas Conservation General Rules. This approval expires on November 25, 1997.
- 2. As allowed by Rule R649-3-20, during the period of time allowed for conducting the stabilized production test, the operator may vent or flare all produced gas well gas as needed for conducting the test.
